

Lunch Meet Web App

Description:

This application is for people that are looking to eat lunch but do not want to eat alone. The people most likely to use this application are people that are courageous enough to meet new people and eat with them. The purpose of this service is to let others meet new people and get lunch together. It will allow people to find others that are also looking to eat with another person. It will communicate what types of food other people want to eat in order to show people that have similar tastes. We are making this project so that people new to an area are able to meet new people that they have a higher chance of getting along with. This app primarily focuses on just being able to get lunch with another person. There are other apps meant to get people together to eat (Grouper and Grubwithus) but they emphasize more of being able to meet other people while this application focuses more on getting the user some lunch.

Technologies:

- AngularJS
- jQuery (if deemed more efficient/easier to implement than through angular)
- Parse/Firebase (to allow users to sign up and show live updates)
- Bootstrap (for styling)
- Yelp (to get data on restaurants)

Features:

- Allows users to sign up through parse
- View other people in the area that are also looking to get lunch
- Display what another person wants to eat
- Data from yelp showing possible to options for places to eat
- Live updates for available users (constant refreshing not needed)

User Stories:

As a person that is hungry, I want to eat good food, so that I do not starve.

As a person that does not like to eat alone, I want to be able to find someone to eat with, so that I have company while I eat.

As a person who likes to try new cuisine, I want to try new restaurants with others, so that I have someone to enjoy the experience with.

As a person living in a new place, I want to try local places while meeting new people, so that I can make friends in a comfortable environment.

As an avid lover of spicy food, I want to find someone else that can handle the heat, so that I can get spicy Thai with someone else that enjoys it.

11/21/2015

Time

12 pm

Description

Gonna get some grub, feeling like thai food.

Create a Date

Creating a date is very easy. You perform a yelp search on what kind of food you want or find a specific restaurant. After that, just enter the date and time and give a description.
